25537	7590	01/24/2006	EXAMINER	
MCI, INC 1133 19TH STREET NW 4TH FLOOR WASHINGTON, DC 20036			REFAI, RAMSEY	
			ART UNIT	PAPER NUMBER
			2152	

DATE MAILED: 01/24/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/159,695	Applicant(s) BARRY ET AL.	
	Examiner Ramsey Refai	Art Unit 2152	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 October 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-43, 45-97 and 99-113 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☐ Claim(s) _____ is/are rejected.
- 7) ☒ Claim(s) 16-43, 45-49, 56-57, 72-97, 99-103, 110, and 111 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. Claim 1-43, 45-97, 99-113 are pending further examination. Claims 58, 112, and 113 have been amended. Claims 16-43, 45-49, 56-57, 72-97, 99-103, 110, and 111 are allowed. Claims 1-15, 50-55, 58-71, 104-109, and 112-113 remain rejected.

Double Patenting

2. The previous Double Patenting rejections are withdrawn due to filing of Terminal Disclaimers October 18, 2005.

Allowable Subject Matter

3. Claims 16-43, 45-49, 56-57, 72-97, 99-103, 110, and 111 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

4. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

5. Claims 1, 2, 4, 58, 59, 61, 112 and 113 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez et al (US 2004/0139178, "Mendez", herein after) and Birrell et al (US 5,805,803, "Birrell", hereinafter).

6. Regarding claim 113, Mendez discloses *a method for providing network management to a customer employing a browser in a communications service enterprise over an internet, comprising: managing a client session over the Internet with a secure web server in response to customer entry and supporting communication of request messages received from the browser to network management resources* (§ 63, establishing secure communication between client and server);

Mendez, further discloses, *initiating a download of a client application integrated for use with the browser, upon successful authentication of the customer, said client application programmed to be interactive communications with the network management resource* (§ 71-73).

Mendez does not explicitly disclose *downloading a logon*. However, in the same field of endeavor, Birrell teaches the same, i.e., checker sends authentication form to client (Col. 4, lines 19-36).

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to incorporate downloading log on object from server to client for authentication purpose as suggested in Birrell with Mendez for overcome impracticalities and security violation as suggested in Birrell (Col. 1, line 60-Col. 2, line 18).

7. Claims 1, 58 and 112, Mendez-Birrell discloses essential elements of the claims, as described in claim 113 above. Therefore, they are rejected by the same rationale.

8. Claims 2 and 59, Mendez-Birrell discloses *a secure web server supports encrypted communication between said client browser and said secure web server, said secure server also providing session management including at least one of customer identification, validation, entitlements and encryption to link said session with said customer* (Mendez ¶ 63).

9. Claims 4 and 61, Mendez-Birrell discloses the system uses digital certificates for authentication (Birrell, Col. 4, lines 36-46).

10. Claims 3 and 60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez-Birrell, applied to claims 2 and 59 and in view of Hind et al (US 5,987,523, "Hind", hereinafter).

11. Claims 3 and 60, Mendez-Birrell discloses the invention substantially as claimed, but does not explicitly disclose a dispatch server couple to say secure server. However, in an analogous art, Hind discloses *a dispatch server, e.g., redirectors, for communicating with said secure web servers, (web server, 402, secure server 406) and a plurality of said one or more remote application resources (host server 407 or 205), said dispatch server providing verification of system access and proxy generation for said system resources after customer's entitlements have been verified* (redirector, Fig. 2-4; Col. 6, line 5-Col. 6, line 51). Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention was made that to incorporate a redirector or a dispatch server as suggested in Hind with Mendez-Birrell, because it would enable the system to provide alternative resources in case of the intent resource is unable to reach (Birrell, Col. 1, lines 45-50), therefore enhancing system's flexibility.

12. Claims 5 and 62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez-Birrell as applied to claims 2 or 60, and in view of Riggins et al. (US 6,131,116, "Riggins", hereinafter).

13. Claims 5 and 62, Mendez-Birrell discloses the invention substantially, but does not explicitly disclose said downloaded web-based GUI comprises:

a backplane object downloaded with, and launched by said web-based GUI, said backplane object launching said one or more client applications upon initiation by said customer, the backplane object further enabling inter-application communications among the client applications and also with said backplane object, wherein said backplane object and the client applications interoperate with one another to provide said integrated customer interface to a plurality of communications network management products and services subscribed by the customer.

However, in the same field of endeavor, Riggins teaches a system for globally accessing computer service comprising of clients and servers (Col. 1, line 5-10), includes

said downloaded web-based GUI comprises a backplane object downloaded with, and launched by said web-based GUI, said backplane object launching said one or more client applications upon initiation by said customer, the backplane object further enabling inter-application communications among the client applications and also with said backplane object, wherein said backplane object and the client applications interoperate with one another to provide said integrated customer interface to a plurality of communications network management products and services subscribed by the customer (Fig 6, download applet 640, select service, which initiates applet 660).

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention was made incorporate the use of applet as taught by Riggins with Mendez-Birrell for integrating applications for clients selection. Doing so will improve client server network communications, speeding up application download process using small pieces of program such as applets as aback plane would allow client server communication faster loading.

14. Claims 6, 7, 9, 11-15, 63, 64 and 67-71 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez-Birrell-Riggins as applied to claims 5 or 62, in view of Radia et al (US 5, 848,233, "Radia", hereinafter).

15. Claims 6 and 63, Mendez-Birrell-Riggins discloses the invention substantially, as claimed, but fails to disclose the system comprises a logon object; a user object and running application in a frame independent from web browser.

However, in the same field of endeavor, Radia teaches a system for accessing network control server, for controlling access to network server. The system processes login control by downloading a login applet to clients. The applet function as a means for transact credential information to the server (Radia, Col. 8, lines 30-67), which is equivalent the claimed logon object and inherent the use of the logon object to create a session object for communicating with the order entry server to provide the customer authentication, wherein upon successful customer validation, the user interface downloads the one or more client applications and the Web-based GUI having the backplane object.

16. Claims 7, 9 and 64, Mendez-Birrell-Riggins-Radia discloses the system substantially, including a user object for representing a current customer, the user object further communicating with the said authentication server to determine the customer's entitlements to the Web enabled communications network management services, wherein the backplane uses the entitlements to display via said integrated interface only those web enabled services to which the user has privilege (Radia, users authentication and receiving information relate the users, Col. 6, lines 9-30).

17. Claims 11 and 67, Mendez-Birrell-Riggins-Radia discloses a set of common graphic user interface objects for enabling the client applications and the backplane to provide common look-and-feel desktop window management feature (Radia, applet, Col. 8, lines 30-67; Hogan, look-and-feel web page, Fig. 4).

18. Claims 12-15 and 68-71, Mendez-Birrell-Riggins-Radia discloses the invention substantially as claimed as described in claim 11, but does not explicitly disclose the server providing data report comprising report requestor and report viewer.

However, Mendez-Birrell-Riggins-Radia teaches a client server system comprising the use of applet, GUI for providing authentication, accessing database for generating invoice, presenting invoice, etc., in response to client requests.

Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to recognize that was a matter of application choice to use Mendez-Birrell-Riggins-Radia to authenticate, access database generating and present report other than invoice

or billing. Doing so, system can be used with other application without imposing burden in modifications and high cost.

19. Claims 8, and 65 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez-Birrell-Riggins-Radia as applied to claims 7 or 64, in view of Chung et al (US 6,012,090, "Chung", hereinafter).

20. Claims 8, and 65, Mendez-Birrell-Riggins-Radia discloses the invention substantially, including application being execute by applets from client through browsers, which is equivalent to the client application is run directly by the backplane object when the customer selects the data management service associated with the client application. Mendez-Birrell-Riggins-Radia fails to explicitly disclose running application in a frame independent from a Web browser's window. However, in the same field of endeavor, Chung teaches a system for improve accessing information over the Internet. The system includes the use of browsers, applet and using applets to open frame independently from access browsing frame (Col. 6, lines 14-54). Thus, incorporating Chung notion, with Mendez-Birrell-Riggins-Radia to open new frame independently from web browser's window, would have been obvious to one of ordinary skill in the art at the time of the invention was made that was a matter of design choice. Because running separate frame or windows, customer would save time to reload the main windows, which may be served as an entry or menu page. The browser will eliminate repetitive download and execute applet, thereby, navigations can be done faster one more effective. For the same motivation, effectiveness and time consuming would enable one skill in the art to design system

Art Unit: 2152

as taught by Chung, which open a new frame rather than a new windows because it would speed up the operations.

21. Claims 10 and 66 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez-Birrell-Riggins-Radia as applied to claims 7 or 65, and Montulli (US 5,774,670) and Harrison et al. (US 5,208,908, "Harrison", hereinafter).

22. Claim 10 and 66, Mendez-Birrell-Riggins-Radia does not explicitly disclose maintains session in static memory. However, in analogous art Montulli teaches storing state information or cookies in a memory (Col.7, lines 4-39). Harrison teaches cache using hi-speed static memory (Col. 8, line 28). It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to maintain session's information in static memory. Because static memory is known to have a fast access time, thus storing state information in static memory would allow fast access to the information, which would increase communication speed and efficiency of the system.

23. Claims 50-51, 53, 104-105 and 107 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez-Birrell as applied to claims 3 and 60, above and in view of Montulli (US 5,774,670).

24. Claims 50-51, 53, 104-105 and 107, Mendez-Birrell discloses the invention substantially, as claimed, but fails to explicitly disclose using cookies for generate communication instance of client identification to verify the client. However, in an analogous art, Montulli teaches using cookies for generate instances for client identification (Col.7, lines 16-54), in order to maintain

Art Unit: 2152

state information for stateless connection network such as HTTP, which widely used in the Internet. Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to incorporate cookie with Mendez-Birrell system. Because network growth and increasing level of client/server interaction, retaining state information at server become too complex and heavy burden to the server, using cookies would enable system to offload retaining state information to the clients will free up resources, processing time of the server, thereby improving client/server service efficiency.

25. Claims 52, 54, 55, 106, 108 and 109 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mendez-Birrell-Montulli, as applied to claims 51 and 105 above and in view of Cianfrocca et al (US 6,088,796).

26. Regarding claims 52, 54, 55, 106, 108 and 109, Mendez-Birrell-Montulli discloses the invention substantially, as claimed, as described in claim 51, including a web server with secure port and encryption decryption. Mendez-Birrell-Montulli fails to discuss using specific secure socket layer and specific encryption algorithm such as RSA were being used. However, in an analogous art Cianfrocca teaches conventional SSL, RSA, and utility of the conventional SSL and RSA for securing data distributions. Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to take advantage from using conventional standard of SSL and RSA with any secure network including Mendez-Birrell-Montulli. Because using conventional, one could reduce system designing cost and time.

Response to Arguments

27. Applicant's arguments have been fully considered but they are not persuasive.
- In the remarks, the Applicant argues in substance that:
 - a. the applied references fail to teach “wherein upon successful authentication of said customer, the logon object is configured to send a command to the authentication server to initiate a download of said one or more application”
 - b. the applied references fail to teach “digital certificates to authenticate a secure web server to said client browser” but merely discloses the use of a digital certification to authenticate the user not a “secure web server”.
 - In response to:
 - a. Examiner respectfully disagrees. Mendez teaches that a user can select a service from a listing of provided services. Before accessing the provided services, the global server confirms that the user has privileges to access the functionality of the global server using a user certificate, digital signature, password, etc. After user access privileges are confirmed, the global server transmits the web page containing the service list to the user terminal. (see paragraphs 0071-0074, Figs 9-10). Mendez does not explicitly disclose *downloading a logon*. However, in the same field of endeavor, Birrell teaches the same, i.e., checker sends authentication form to client (Col. 4, lines 19-36). (Motivation to combine is located in 103 rejections above). Therefore, the applied references meet the scope of the claimed limitation.
 - b. Examiner respectfully disagrees. Mendez and Birrell both teach that users are previously authenticated at web server using digital certificates, passwords,

challenge/response techniques etc. (see Birrell column 4, lines 36-46 and Mendez paragraphs 0071-0073). Applicant is arguing that the applied references fail to teach authenticating a "secure web server". However, one skilled in the art would know that authentication between a user and a server would require that both the user and server exchange authentication information to authenticate one another to provide a secure communication, thereby creating a secure environment which includes a secure web server. Therefore the applied references meet the scope of the claimed limitation.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

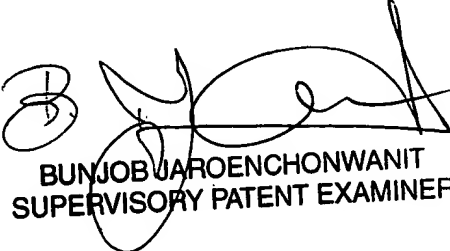

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ramsey Refai whose telephone number is (571) 272-3975. The examiner can normally be reached on M-F 8:30 - 5:00 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bunjob Jaroenchonwanit can be reached on (571) 272-3913. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
